

## Status Check with Org Mentors

When: 10/28/16 10:30a-10:45a EST

How: Phone Conversation

Who: Jeff Duncan, Dan Abel

- Jeff reviewed the Tech Presentation and had no questions; approved the design
  - Nutshell Design: Create a web service that will expose/return data stored in the DoC\_PD\_Master table for consuming applications. The data returned should include license information (number, status, type/name, etc); in order for the consuming applications to validate whether the person has a valid license in order to perform the different tasks.
    - Example Use Case: Dr X. signs a death certificate; this information is entered into App XYZ; App XYZ calls the web service to determine whether Dr X has a valid "physician" license.
- I asked: which of the DoC\_PD\_Master table fields would he consider mandatory to return to the Consuming Applications?
  - Jeff stated the following:
    - LICENSE\_NO
    - LICENSE\_NAME
    - LIC\_STATUS
  - Any other fields would be "nice to have"
- Jeff stated:
  - The DoC\_PD\_Master table can have multiple entries for any given person; however it can only have one entry per person+license\_name combination.
    - Dan A Thought: Not sure whether we validate or invalidate a request for multiple person+license combinations; I suggest we simply return the data we find and allow the consuming application to filter out any duplicates.
- We discussed having (2) future Status Check in order to ensure we are on the right path and meeting requirements/expectations.
  - I will send these tentative dates to Jeff so can check his schedule:
    - Wednesday 11/9/16 10pm EST
    - Wednesday 11/23/16 10pm EST
- Jeff is working on scrubbed dataset and plans to send out today (10/28/16)...

Existing SQL Server Table – **DoC\_PD\_Master**

```
[dbo].[DoC_PD_Master](  
    [DoC_PD_ID] [varchar](50) NULL,  
    [LICENSE_NO] [varchar](50) NULL,  
    [PROFESSION_NAME] [varchar](50) NULL,  
    [LICENSE_NAME] [varchar](50) NULL,  
    [FIRST_NAME] [varchar](50) NULL,  
    [LAST_NAME] [varchar](50) NULL,  
    [SORT_NAME] [varchar](150) NULL,  
    [FULL_NAME] [varchar](150) NULL,  
    [AKA] [varchar](100) NULL,  
    [NAME_SUFFIX] [varchar](50) NULL,  
    [DATE_OF_BIRTH] [varchar](50) NULL,
