X. Sheldon Gu - xgu60.gt@gmail.com
Ken Nguyen - kennguyenga@gmail.com
Hasti Ghabel - hghabel1@gatech.edu

Topics

- Review high level design for accuracy
- Review mid-level design and mock ups for accuracy
- Confirm specific form details to be implemented as web screens
- Answer current open questions

Questions

1. How many forms will we be implementing?
2. Is the filter FHIR questionnaire something outside of the design that we reviewed today?
3. What it the exact mechanism to retrieve the legacy records for importing to the FHIR system?
4. How do we determine which records need to be imported? How do we identify the records to be converted? How many different types of source objects will we be importing from the legacy system?
5. Is updating to the state registry out of scope of what we are implementing?
